

AMENDMENTS TO THE CLAIMS:

Please cancel Claims 8, 20, 32, and 41 through 43 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 1, 3, 5, 6, 7, 9 through 13, 16, 21 through 23, 25 through 31, and 33 through 36 and add Claims 44 through 46 as follows.

1. (Currently Amended) A control method comprising the steps of:
reading out a user profile; and
controlling a reconstruction of contents which are displayed on a display for displaying reception data, ~~in accordance with said user profile~~ wherein in said controlling step, contents selected from a plurality of display contents are reconstructed in accordance with the user profile.

2. (Original) A method according to claim 1, wherein in said reading step, the user profile is read out from a connected memory medium.

3. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, a screen for user authentication is reconstructed in accordance with the user profile.

4. (Original) A method according to claim 1, wherein in said reading step, the user profile for user authentication is read out from a second file in a first file in which an application for the user authentication has been stored, and a key for accessing to a fourth

file in which another application has been stored is read out from a third file which is accessible after succeeding in said user authentication.

5. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, a screen is reconstructed by a language according to the user profile.

6. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, the contents according to the user profile are downloaded to a display terminal through a network.

7. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, when there is no user profile, predetermined contents are reconstructed.

8. (Cancelled)

9. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, contents are reconstructed in accordance with display contents described by a text markup language and the user profile.

10. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, a display is controlled in accordance with the user profile for every object constructing one scene.

11. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, an object is replaced with a substitute object in accordance with the user profile for every object constructing one scene.

12. (Currently Amended) A method according to claim 1, wherein in said ~~control~~ controlling step, a copy guard process of the display contents is executed when the reception data and the display contents are different.

13. (Currently Amended) A control apparatus comprising:
reading means for reading out a user profile; and
control means for controlling a reconstruction of contents which are displayed on a display for displaying reception data, ~~in accordance with said user profile~~ wherein said control means reconstructs contents selected from a plurality of display contents in accordance with the user profile.

14. (Original) An apparatus according to claim 13, wherein said reading means recognizes the user profile from a connected memory medium.

15. (Original) An apparatus according to claim 13, wherein said control means reconstructs a screen for user authentication in accordance with the user profile.

16. (Currently Amended) An apparatus according to claim 13, wherein said reading means reads out the user profile from a memory medium ~~comprises~~ comprising:

- a first file in which an application for user authentication has been stored;
- a second file for storing the user profile for the user authentication;
- a third file which is accessible after succeeding in said user authentication; and
- a fourth file for storing another application, and

wherein a key for accessing to said fourth file is stored in said third file.

17. (Original) An apparatus according to claim 13, wherein said control means reconstructs a screen by a language according to the user profile.

18. (Original) An apparatus according to claim 13, wherein said control means downloads the contents according to the user profile to a display terminal through a network.

19. (Original) An apparatus according to claim 13, wherein said control means reconstructs predetermined contents when there is no user profile.

20. (Cancelled)

21. (Original) An apparatus according to claim 13, wherein said control means reconstructs contents in accordance with display contents described by a text markup language and the user profile.

22. (Currently Amended) An apparatus according to claim 13, wherein said control means controls a display in accordance with the user profile for every object constructing one scene.

23. (Currently Amended) An apparatus according to claim 13, wherein said control means replaces an object with a substitute object in accordance with the user profile for every object constructing one scene.

24. (Original) An apparatus according to claim 13, wherein said control means executes a copy guard process of the display contents when the reception data and the display contents are different.

25. (Currently Amended) ~~An program or a memory medium which stores said program, wherein said program comprises~~ comprising the steps of:

detecting a user profile; and

controlling a reconstruction of contents which are displayed on a display for displaying reception data, ~~in accordance with said user profile~~ wherein in said controlling step, the contents selected from a plurality of display contents are reconstructed in accordance with the user profile.

26. (Currently Amended) A program ~~or a medium~~ according to Claim 25, wherein in said detecting step, the user profile is read out from a connected memory medium.

27. (Currently Amended) A program ~~or a medium~~ according to Claim 25, wherein in said ~~control~~ controlling step, a screen for user authentication is reconstructed in accordance with the user profile.

28. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said detecting step, the user profile for user authentication is read out from a second file in a first file in which an application has been stored, and a key for accessing to a fourth file in which another application has been stored is read out from a third file which is accessible after succeeding in said user authentication.

29. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, a screen is reconstructed by a language according to the user profile.

30. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, the contents according to the user profile are downloaded to a display terminal through a network.

31. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, when there is no user profile, predetermined contents are reconstructed.

32. (Cancelled)

33. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, contents are reconstructed in accordance with display contents described by a text markup language and the user profile.

34. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, a display is controlled in accordance with the user profile for every object constructing one scene.

35. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, an object is replaced with a substitute object in accordance with the user profile for every object constructing one scene.

36. (Currently Amended) A program ~~or a medium~~ according to claim 25, wherein in said ~~control~~ controlling step, a copy guard process of the display contents is executed when the reception data and display contents are different.

37. (Original) A control apparatus comprising:

detecting means for detecting a user profile from a memory medium; and
control means for controlling a reconstruction of contents which are displayed
on a display for displaying reception data in accordance with a user profile.

38. (Original) An apparatus according to claim 37, wherein said control means
controls a user authentication screen which is displayed on said display for displaying the
reception data.

39. (Original) An apparatus according to Claim 38, wherein said control
means selects data input means for the user authentication in accordance with the user
profile.

40. (Original) An apparatus according to Claim 38, wherein said control
means selects data output means for the user authentication in accordance with the user
profile.

41. (Cancelled)

42. (Cancelled)

43. (Cancelled)

44. (New) A control method comprising the steps of:

reading out a user profile for user authentication from a second file in a first file in which an application for the user authentication has been stored;

reading out a key for accessing a fourth file in which another application has been stored from a third file which is accessible after succeeding in said user authentication; and

controlling a reconstruction of contents which are displayed on a display for displaying reception data in accordance with the user profile.

45. (New) A control apparatus comprising:

reading means for (i) reading out a user profile from a memory medium storing: (a) a first file in which an application for user authentication has been stored, (b) a second file for storing the user profile for the user authentication, (c) a third file which is accessible after succeeding in said user authentication, and (d) a fourth file for storing another application, and (ii) reading out a key for accessing said fourth file, which key is stored in said third file; and

control means for controlling a reconstruction of contents which are displayed on a display for displaying reception data in accordance with the user profile.

46. (New) A program comprising the steps of:

reading out a user profile for user authentication from a second file in a first file in which an application for the user authentication has been stored;

reading out a key for accessing a fourth file in which another application has been stored from a third file which is accessible after succeeding in said user authentication; and

controlling a reconstruction of contents which are displayed on a display for displaying reception data in accordance with the user profile.
